

## 17603 Antihopping slipper clutch Ducati 848 – mounting instructions

Congratulations, you bought one of the best clutch systems for your 848.

Everytime is better when this operation is done by an experienced Ducati workshop, or mechanic.

1. Read these instructions with photos before you start. Check if the set includes all parts ( pic. 17603a ).
2. Remount the old clutch drum ( according to the Ducati workshop manual ), clean the thread on the shaft and the big nut from old glue with brake cleaner.
3. Check the positioning of the shim ( STD ) between the basket and drum, when you remounted it ( pic a ).
4. Install the premounted slipper drum ( b ).
5. Put the STD steel washer as STD ( c ).
6. Fix the big nut ( STD ) ( d ) with a torque of 127 Nm and fix it with glue Loctite No. 620 ( e ).
7. This slipper clutch is designed for using STD clutch plates. NEVER install the first friction plate with the steel rings on the first position! Install another friction plate at the first position ( f ), then the steel plate ( g ), and after the friction plate with the bigger inside diameter and both steel rings ( h,i,j ). Install all other clutch plates in the same position as before ( k ).
8. Reinstall the STD push rod from the STD pressure plate and install it into the kit pressure plate ( l ).
9. Install the pressure plate ( m ).
10. Put the STD clutch springs in position as before, put the spring kit-bushings, fix all with M6 bolts with a torque of 8 – 10 Nm ( n ).  
Check the correct clearance between the pressure plate and the clutch hub in the bore in the pressure plate. The correct clearance is ca. 1.3 mm. Minimal clearance is 0.5mm, in case it is smaller, change all friction plates
11. Everytime use a new clutch cover gasket.
12. Mount the case cover according to the Ducati workshop manual ( o )

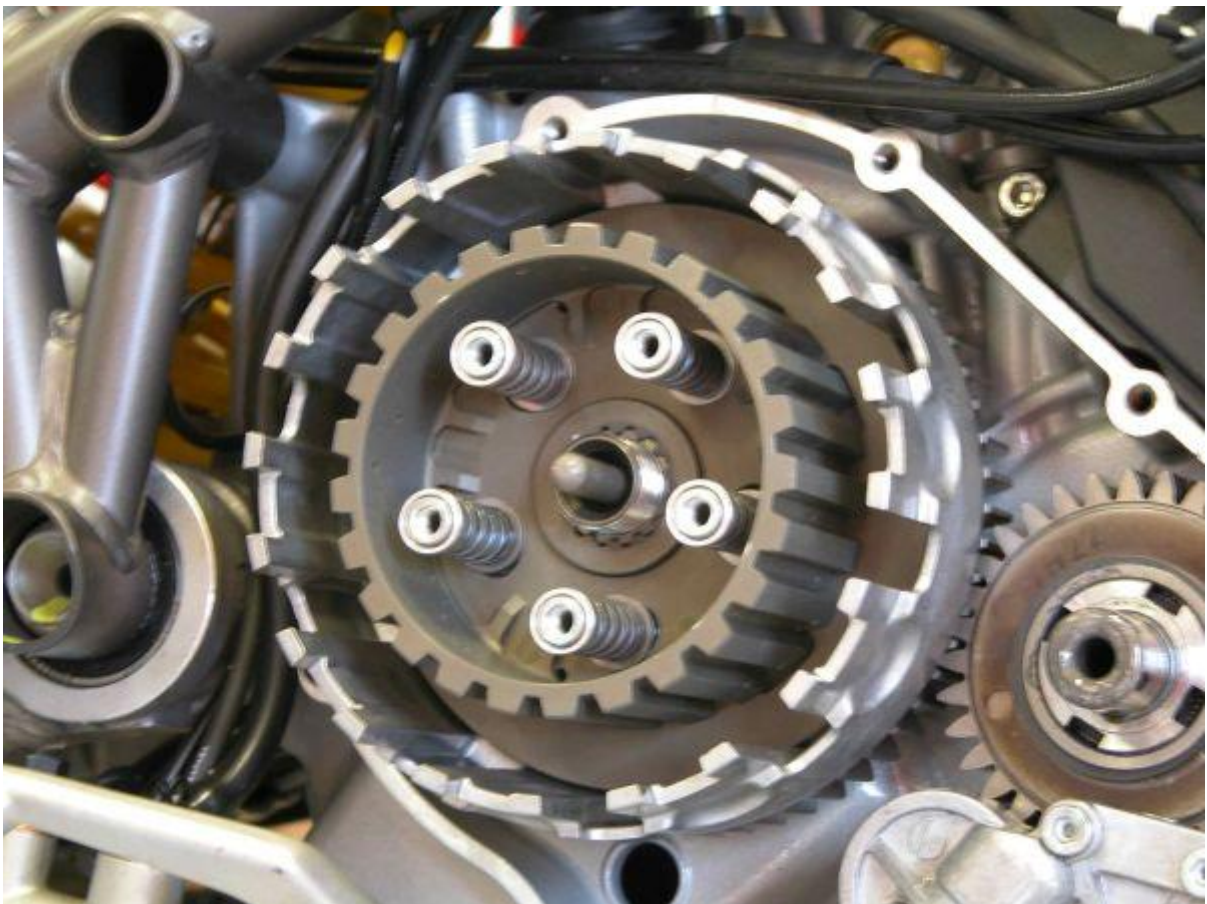

### LIST OF PARTS

- 1 pc. clutch drum premounted
- 1 pc. pressure plate
- 5 pcs. spring bushings
- 5 pcs. bolt M6
